

Divided Slide-Out Shelves

Prices based on width only (see note below). Includes normal installation.

Our most popular divided slide-out for single and double door cabinets. 6"H with a scooped out front for even easier access. Includes 3 scooped divider inserts for every 12" of width. We recommend full-extension slides if you're planning on having another slide-out installed above this one.

A popular option for narrower, single door cabinets where the door is attached to the slide-out for one step access. 6"H with an extra tall front panel (10") to support the door. Includes 3 scooped divider inserts for every 12" of width. This drawer requires full-extension slides (which are included in the price listed below)

Our adjustable lid divider is a great option for those that have a wide enough cabinet (minimum width is 24", but 27"W and greater is recommended). Because of the angle of the divider inserts, we can only offer this for 4"H and 5"H slide-outs. We also recommend full-extension slides to make accessing the larger lids (usually stored toward the back) easier. Typically 8-9 lids can be stored in a base cabinet slide-out of 22"D.
